

WELCOME
TO FIRST CLASS

Sirius S.p.a., established in 1996, operates in the market sector of residential air ventilation and purification, in particular it produces cooker hoods for residential kitchens. Quality, innovation, professional competence, technology and design are rolled into one with a clear and dynamic commercial policy that has permitted a rapid growth of the company, ensuring market penetration throughout the world.

Sirius has, in a short time, become a world leader in the sector of high quality decorative cooker hoods, encompassing a wide product range and exporting 90% of its production. The strategic choices accomplished in the technical productivity sectors, dictated by many years of experience, have been of fundamental importance for the growth and success of the company.

A wide range of products, different technological possibilities and innovation, functionality of the components used, such as the motors, and different ventilation components represent a combination between design and functionality. This gives the clients a wide choice, to meet all of their ventilation needs. Our company's philosophy, innovative in the market of residential kitchen ventilation, aims to maintain and improve the high quality standards of our production in style, technology and design, which are synthesized by the realization of modular and innovative ventilation systems.

L. Nizer

CERAMIC HANDMADE

MADE IN DERUTA, ITALY

Ceramic is an extraordinary material. Among the natural ones, it's the material that offers most versatility. Various methods of manufacturing allow, in fact, many different applications. You can find it in the most diverse contexts: in a high school classroom, where students shape clay using a press during art classes or in the most technological and advanced implementations, such as the coverings of the Space Shuttle.

Though originating from the plain mixing of water and clay, it has the most resistant physical features.

Extraordinary objects have been carved out of this material: from Jo Ponti and Raymond Loewy's porcelains to the creations of the most influencing Italian design master, Ettore Sottsass.

In spite of its limitless potential, ceramic has always been considered as a material belonging to the world of arts, rather than industry. Apart from bathrooms, there are only few examples of ceramic applications for the production of industrial goods.

The curiosity of experimenting new languages in a pretty industrial field - as the one of electric appliances is - pushed us forward. It drew us to cross the border between art/handcraft and industry.

Thanks to the cooperation of professional figures coming from different fields - such as: industrial designers, craftsmen, engineers, technical designers - we gave life to objects with a technological soul. Though being produced in series, they maintain that authenticity typical of the unique piece.

- For the installation create a niche in the countertop for 104x490 mm

- This downdraft is equipped with anti-crushing safety system

- The motor is not included in the external motor version. See p. 124-125

- The motor on board needs to be purchased separately.

DOWNDRAFT - UPRIGHT | 49

*"The air up there in the clouds
is very pure and fine,
bracing and delicious.
And why shouldn't it be?
It is the same the angels breathe."*

Mark Twain

KIT INSTALLATION SDD16 WITH SEM1 OR SEM2

**S DD2 - SDD2 L F.T. - S DD3 - S DD4 - S DD12 AND S DD13 WITH SEM10
SDD2 L F.T. CM 90 WITH SEM12***

KFHE2
BASE FILTER
UNIT HIGH
EFFICIENCY
FOR DOWNDRAFT

KF
Charcoal filters for
use with df when
recirculating

SCET
The remoter motor controller
enables to control the external
motors (SEM) Sirius in case of
special products, wooden made
hoods or ventilation systems
without using the finished
product.

LBR
Stainless steel
baffle filter-
optional upgrade

S-DF2**
AIR DEVIATOR FOR USE
WITH CEILING HOODS
WHEN RECIRCULATING
BUILT-IN VERSION
The air deviator needs
to be installed at a
minimum distance
of 1500mm from the
extractor

DF
(AIR DEVIATOR FOR
USE WITH KF WHEN
RECIRCULATING)

**ISLAND
FIXING
SYSTEM**
PATENTED

**REMOTE
CONTROL**
(optional)

* Optional bracket kit
**Cut out: create a niche of 502mm x 202mm
whose minimum height to be reached is 220mm.

LED technology that lasts 30.000 hours

The lighting surface is homogeneous, there are no overshadows and the light source is out of sight.

Spotlights are entirely assembled in Italy

The technical features of the spotlights, such as power, dimensions, colour temperature and other technical specifications have been studied, defined and optimized according to the finished product to be realized.

LIGHTING

BRUSHLESS motors

Energy saving

High suction efficiency

Using a brushless motor allows to lower the consumption (kw/h) by 85% when the appliance is used in the low – medium speeds and by 35% in high speeds.

Quietness

It is the quietest motor on the market and its performances remain stable in any given use condition, even with complicated installations.

Longer life of the product

High efficiency carbon filters allow a higher filtering efficiency compared to standard carbon grain filters.

These filters are made of a mold of foam in polyurethane, having activated carbon spheres in it and allowing high permeability of the air compared to normal carbon grain filters. At the same time, it allows the highest absorption of smells thanks to its top quality activated carbon.

The advantages of using a high efficiency carbon filter, instead of a typical carbon filter, are:

Higher filtering efficiency

Smaller losses during air filtration

Long lasting

To restore / regenerate high efficiency and washable filters it is necessary to wash them in the dishwasher and then put them for 1 hour into the oven at max 90°C.

EFFICIENCY is measured by the absorption capacity of the filter related to its weight. If the filter weight is 100g, an efficiency of 98.8 means that it can absorb 98.8g of greases.

LIFESPAN we took into account a standard use of 1 hour/day at medium speed level.

HIGH EFFICIENCY carbon filter
