WELCOME
TO FIRST CLASS

Sirius S.p.a., established in 1996, operates in the market sector of residential air ventilation and purification, in particular it produces cooker hoods for residential kitchens.
Quality, innovation, professional competence, technology and design are rolled into one with a clear and dynamic commercial policy that has permitted a rapid growth of the company, ensuring market penetration throughout the world.

Sirius has, in a short time, become a world leader in the sector of high quality decorative cooker hoods, encompassing a wide product range and exporting 90% of its production.
The strategic choices accomplished in the technical productivity sectors, dictated by many years of experience, have been of fundamental importance for the growth and success of the company.

A wide range of products, different technological possibilities and innovation, functionality of the components used, such as the motors, and different ventilation components represent a combination between design and functionality.
This gives the clients a wide choice, to meet all of their ventilation needs. Our company's philosophy, innovative in the market of residential kitchen ventilation, aims to mantain and improve the high quality standards of our production in style, technology and design, wich are synthesized by the realization of modular and innovative ventilation systems.

Sirius

SINCE 1996, WE LIKE TO BE FIRST

1997 the FIRST one to use the aluminum motor
2005 the FIRST one to market the downdraft hood
2007 the FIRST one to market the ceiling hood
2014 the FIRST one to create range hoods in ceramic
2019 the FIRST one to market a new concept of ceiling hoods
2022 the FIRST one to create autonomous and automatic range hoods

DESIGN & TECHNOLOGY

MANAGE YOUR RANGE HOOD WITH YOUR SMARTPHONE THROUGH SIRIUS APP

Interact and control your range hood, in a fast and efficient manner, even remotely.
Our new technology replaces and widens the functionalities of traditional controls.
Easy and intuitive to use, it allows adjusting lighting and suction power and, in some specific models, it can even monitor and detect air quality.
Sirius App sets up automatically according to the technical and functional specifications of the purchased model.
Its technology alerts the user if a maintenance action is required (e.g. replacement of filters).

MANAGE YOUR RANGE HOOD THROUGH THE VOCAL ASSISTANTS GOOGLE HOME OR ALEXA

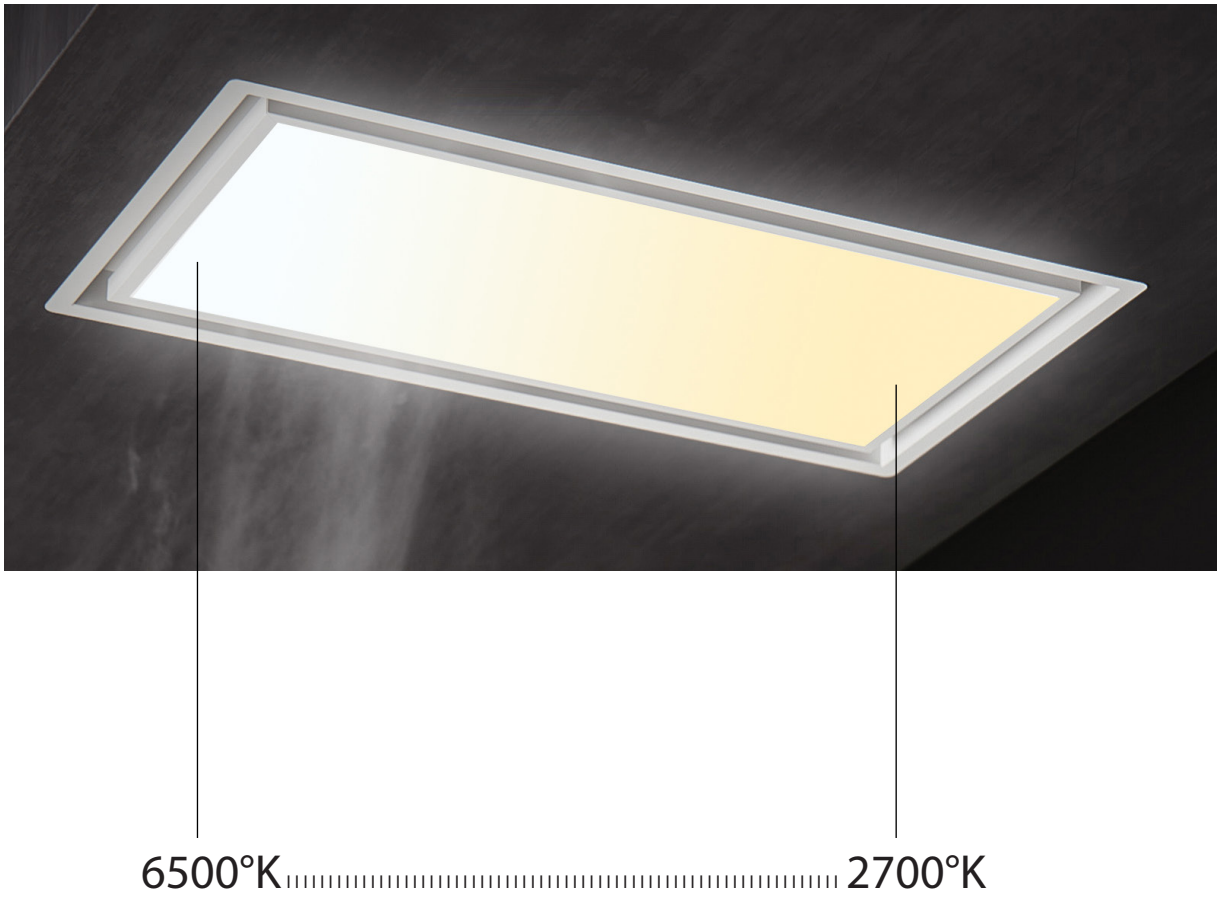
Turn your range hood on and select the suction speed, then think only about the pleasure of cooking. Manage the lighting, choose the color temperature you prefer, from hot to cold light, increase or reduce its intensity.

Google HOME

amazon alexa

LIGHTING

The latest generation LEDs in our range hoods allow to manage light intensity by increasing or decreasing its power and choose colour temperature from warm to cold light (from 2700°K to 6500°K), thus adapting hood lighting to the light of your domestic environment.
The lighting surface in our lighting system is perfectly homogeneous since there are no overshadows.



BRUSHLESS
motors

High suction efficiency
Using a brushless motor allows to lower the consumption (kw/h) by 85% when the appliance is used in the low – medium speeds and by 35% in high speeds.
Quietness
This is the quietest motor in the market and its performances remain stable in any given use condition, even with complicated installations.
Longer life of the product

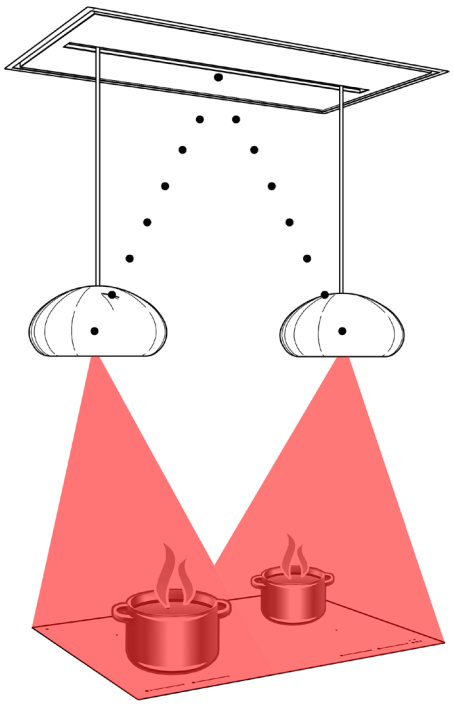
ENERGY SAVING

HIGH EFFICIENCY
carbon filter

High efficiency carbon filters allow a higher filtering efficiency compared to standard carbon grain filters. These filters are made of a mold of foam in polyurethane, having activated carbon spheres in it and allowing high permeability of the air compared to normal carbon grain filters. At the same time, they allows the highest absorption of smells thanks to their top quality activated carbon.
The advantages of using a high efficiency carbon filter, instead of a typical carbon filter, are:
Higher filtering efficiency
Smaller losses during air filtration
Long lasting
To restore / regenerate high efficiency and washable filters it is necessary to wash them in the dishwasher and then put them for 1 hour into the oven at max 90°C.
EFFICIENCY is measured by the absorption capacity of the filter related to its weight. If the filter weight is 100g, an efficiency of 98.8 means that it can absorb 98.8g of greases.
LIFESPAN we took into account a standard use of 1 hour/day at medium speed level.

ARTIFICIAL INTELLIGENCE SYSTEM - AIS

This innovative system, patented by Sirius, is made up of sensors and technologically advanced electronic devices working in synergy.
As you start cooking, the range hood autonomously activates and adjusts the suction power, by detecting constantly both the temperature and air quality while cooking.
This innovative technology allows an autonomous and automatic operation of products and is completely independent from the kind of hob you use (gas, induction, etc.).



BI-POWER TECHNOLOGY

Sirius bi-power technology allows to get a high energy saving and a higher product efficiency, especially in range hoods in filtering version or range hoods installed in ducting version with ducts having diameters less than 150 mm.
The range hood is equipped with a 800 m3/h fan. Through this innovative technology and touch control, you can set the parameters of power capacity (m3/h), absorption (W) and noise level (dBA).
This means an improvement in terms of efficiency thanks to an airflow suitable for the application (filtering or ducts having diameters less than 150 mm), an energy saving of about 35% and a noise level reduction of about 12%.

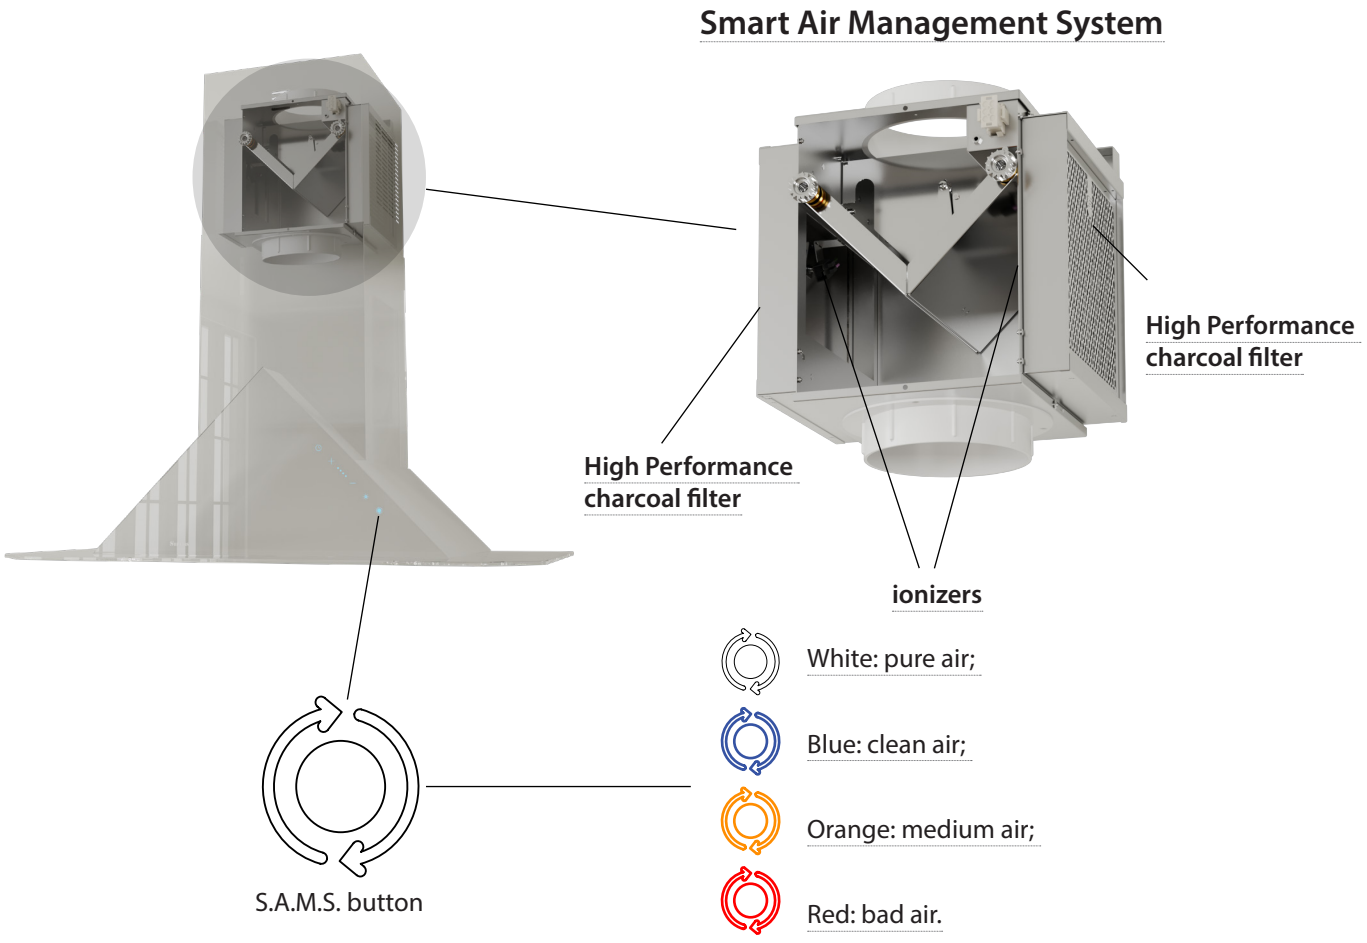
ENERGY CONSUMPTION 35 %

NOISE LEVEL REDUCTION -12 %

ANTI-DROP SYSTEM

This is an innovative anti-condensation system, based on thermal resistances inside the glass panels or the stainless steel panels. By heating the surface in contact with the vapours coming from the induction hob, this system does not allow condensation or water drops to develop and fall on the hob.

Sirius range hood is equipped with an **air purification system** inside the upper chimney.
This system is made up of an air quality sensor, 2 ionizers and a valve activated by a micromotor, allowing to exhaust fumes outside (ducting version) or towards charcoal filters and side ionizers (filtering version).



This range hood is equipped with a new Touch control having a S.A.M.S. button, indicating always the air quality through the color variation:

White: clean air; Blue: good air; Orange: medium air; Red: bad air.

By pressing the button "S.A.M.S.", you can change the version of the hood from ducting (open valve and air exhausted outside) to filtering and purifying (closed valve; fumes go out through the side grills of the chimney; the air returns to the kitchen once filtered and purified thanks to high efficiency charcoal filters and ionizers).

The **Smart Air Management System** is usually set in ducting version (Fig.1). The valve is open and fumes go outside through a ducting system.
After installation, the product works as a standard range hood, with a white colour rear-lighted touch control.

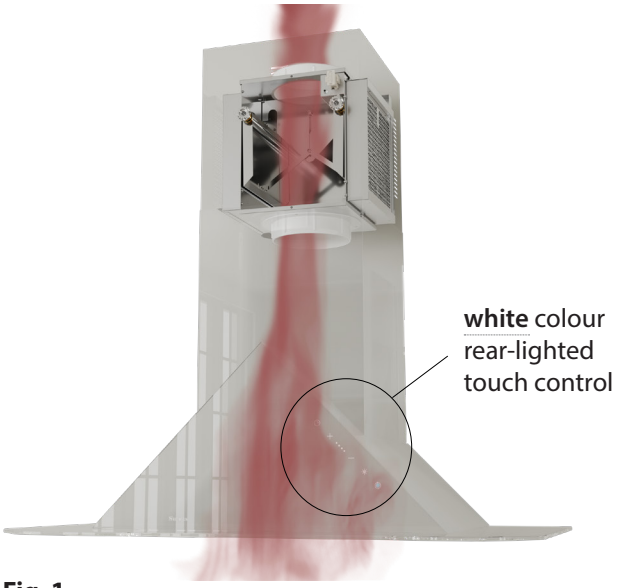


Fig. 1

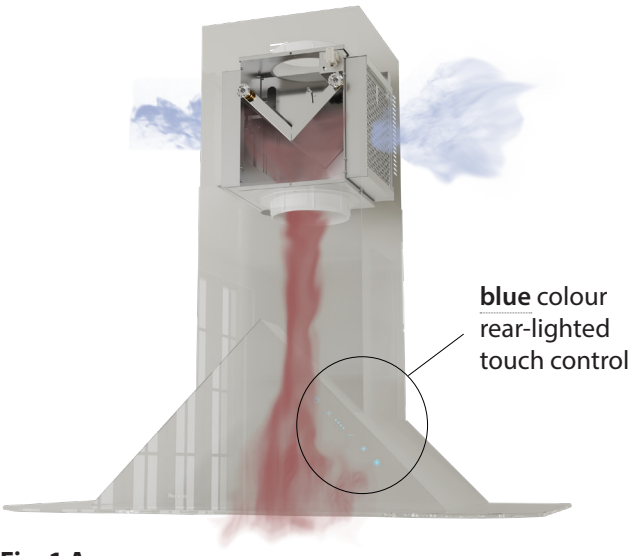

Fig. 1 A

After or while cooking, if the button (S.A.M.S) highlights a bad air quality, you can activate the Smart Air Management system by pressing this button (Fig.1A).
The backlight of the touch control changes from white to blue colour.
The valve closes, the ionizers start functioning and the air returns to the kitchen through the chimney side grills.

The process of filtration and air purification takes place through 2 High Performance charcoal filters and 2 ionizers.
You can keep on using all the product functions as usual (change in speed, lights, etc).
You can activate this new system even when the product is switched off, in case of bad quality air.

By pressing the button "S.A.M.S.", the range hood sets in filtering mode with motor at 1st speed.
You can permanently set the Smart Air Management function during installation.
You just have to hold down the button "S.A.M.S" for at least 3 seconds in order to set the product in ducting or filtering version.

THE PASSION OF CONCEIVING AND FINDING INNOVATIVE DESIGN SOLUTIONS

The aesthetics of the products and the corporate image are entrusted with the architect Giacomo Fava, who explains Sirius philosophy this way:
“Our mission is to imagine products that connect with the end user on an emotional and functional level. The creative approach entails a deep analysis of materials, technologies and human behaviors, with the aim to create objects that are simple, beautiful, clear, easy to use and long - lasting: objects with which you can fall in love. At the core of every single project there is a long work, that sees the tight cooperation and synergy between the company and all the entities involved in the production process, to create a good product which is introduced in the market at the right moment”.

CERAMIC HANDMADE

Ceramic is an extraordinary material. Among the natural ones, it's the material that offers most versatility. Various methods of manufacturing allow many different applications. You can find it in the most diverse contexts: in a high school classroom, where students shape clay using a press during art classes or in the most technological and advanced implementations, such as the coverings of the Space Shuttle.

Though originating from the plain mixing of water and clay, it has the most resistant physical features.
Extraordinary objects have been carved out of this material: from Jo Ponti and Raymond Loewy's porcelains to the creations of the most influencing Italian design master, Ettore Sotsass.

In spite of its limitless potential, ceramic has always been considered as a material belonging to the world of arts, rather than industry. Apart from bathrooms, there are only few examples of ceramic applications for the production of industrial goods.

The curiosity of experimenting new languages in a pretty industrial field - as the one of electric appliances is - pushed us forward. It drew us to cross the border between art, handcraft and industry.

Thanks to the cooperation of professional figures coming from different fields such as, industrial designers, craftsmen, engineers and technical designers, we gave life to objects with a technological soul. Though being produced in series, they maintain that authenticity typical of the unique piece.

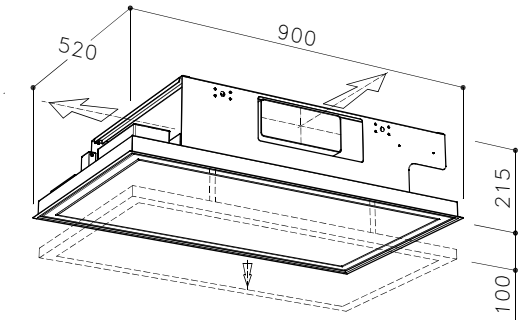
CEILING HOODS

INSIDE OUT SLT 980

Inside Out is a ceiling hood equipped with advanced technologies and characterised by minimal lines and extreme attention to details.
This is the perfect synthesis between aesthetics, efficiency and functionality.
This range hood activates by remote control and descends from the ceiling, allowing the extraction of cooking vapours.
After use, the hood goes back to hide in the ceiling.

Motor:
Motor on board or external motor version (to be purchased separately)
Lighting:
Dimmable and dynamic Led 11W (2700 to 6500K)
Control panel:
Remote control
Filter:
Anodized aluminum (5+1 layers)
Finishing:
White matt painted



Installation:
For the installation create a false ceiling with a niche of 890mm x 510mm whose minimum height to be reached is 220 mm

product	dim.	motor	model identifier	EEC

SUPERNOVA SLT 976

Motor:
Motor on board or external motor version (to be purchased separately)
Lighting:
2x1,4W Dimmable and dynamic spot leds (2700 to 6500°K)
Control panel:
Remote control
App
Voice assistant
Filter:
Anodized aluminum (5+1 layers)
Material:
Painted Stainless Steel
Handmade ceramic domes

Finishing:
Ceiling plate matt white painted
Ceramic domes white or black matt

Installation:
For the installation create a false ceiling with a niche of 425mm x 915mm whose minimum
height to be reached is 200 mm

It is possible to add a Supernova Lamp (max 3 units)

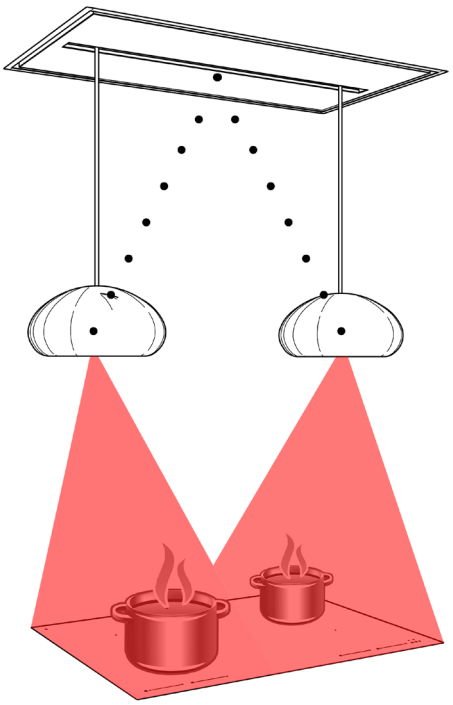
SUPERNOVA AUTOMATIC

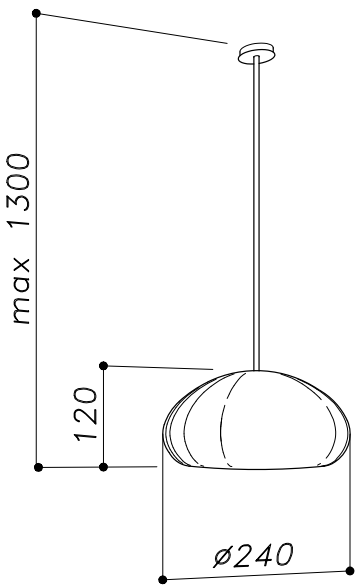


ARTIFICIAL INTELLIGENCE SYSTEM - AIS

This innovative system, patented by Sirius, is made up of sensors and technologically advanced electronic devices working in synergy.
As you start cooking, the range hood autonomously activates and adjusts the suction power, by detecting constantly both the temperature and air quality while cooking.
This innovative technology allows an autonomous and automatic operation of products and is completely independent from the kind of hob you use (gas, induction, etc.).

SUPERNOVA LAMP

Entirely hand-made by Deruta ceramic masters, Supernova Lamp is the new Sirius hanging lamp that can perfectly match Supernova range hood.
A new generation led spot properly lightens the worktop below.



Lighting
1x1,4W Dimmable and dynamic Led spot (2700K to 6500K)
Material
Handmade ceramic
Finishing
Ceramic Dome: matt black or matt white painted

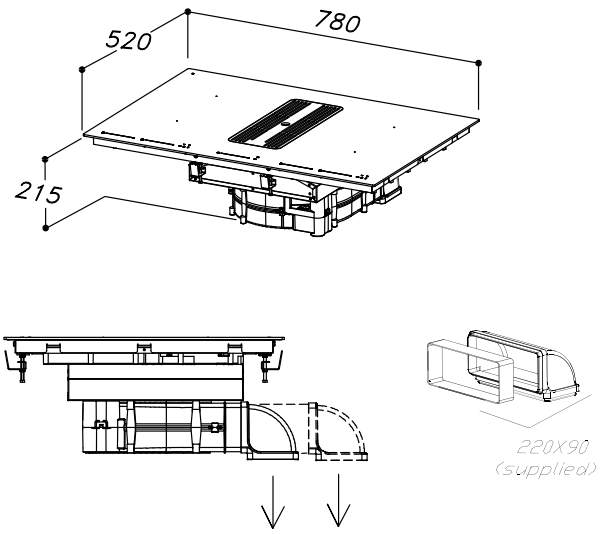
VENTED INDUCTION HOBS

SYNTHESIS SDDH6

Motor on board (Brushless)
Product Operation
Touch control 4 speeds + timer
Material
Black ceramic glass
Black painted metallic grill
Hob Specifications
Induction G5
Automatic heat-up function
Safety Lock
Timer function
Over-heating operation
"Keep Warm" function
Pause and recall function
Bridge function
Touch controls
Booster function on all zones
Cooking output
4 zones 184x220mm 2100W; Power 3700W
Max power 7,4 kW
Electric rating 220-240V (50/60 Hz)
Filtering Kit (see page 172)
Cut out:
Create a niche in the countertop using the following dimensions:
750x490mm



product	motor	model identifier	EEC

SENSE

Lighting
1x1,4W Dimmable and dynamic Led spot (2700K to 6500K)
Material
Ceramic
Finishing
Ceramic Shell: Handmade ceramic black or white matt painted

Inside the ceramic lamp SENSE, the technological system patented by Sirius.
This can match the Synthesis vented induction hob, assuring both a proper lighting and the maximum energy comfort.
The sensors and electronically advanced devices
detect air quality and the temperature produced while cooking, automatically activating the suction of the vented induction hob.

art direction
Giacomo Fava

Security and respect of the general requirements
of Directives are the basis for the realization
of our products. It is a question of quality
and security, well spread in our company.
Together with the protection of environment,
and the health of our employees. Working
with us with passion, being respectful and
taking care of our company is like living at home.
